

Calcula el valor de cada uno de los ángulos que se indican en las figuras siguientes:

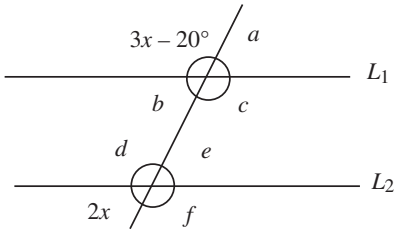

1.

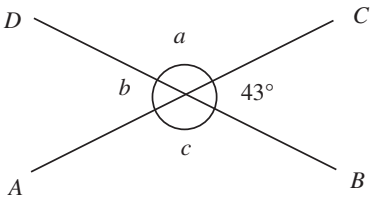

2. Si $L_1 \parallel L_2$

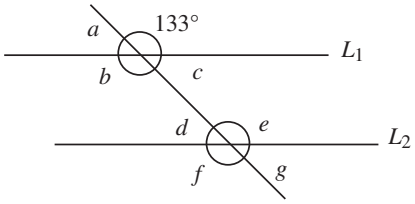

3. Si $L_1 \parallel L_2$

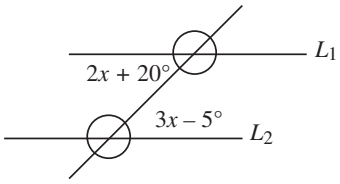

4.

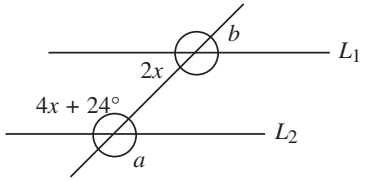

5. Si $L_1 \parallel L_2$, encuentra el valor de los ángulos

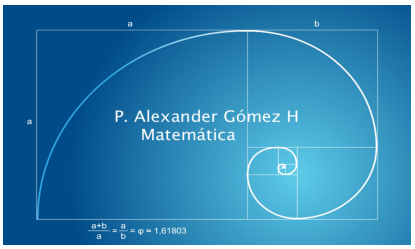

6. Si $L_1 \parallel L_2$, halla el valor de x

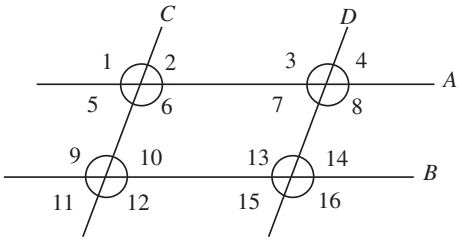

7. Si $L_1 \parallel L_2$, determina el valor de x, a y b

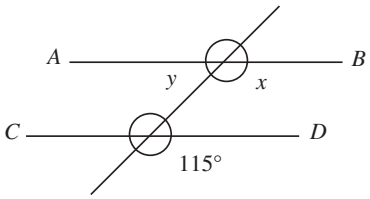

8. En la siguiente figura: $A \parallel B$, $C \parallel D$ y el $\angle 3 = 110°$. Determina la medida de los ángulos $\angle 4$, $\angle 7$, $\angle 1$, $\angle 10$, $\angle 13$ y $\angle 16$

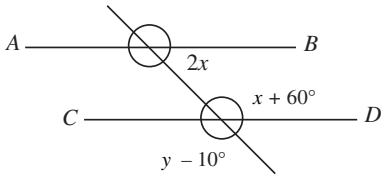

En los ejercicios del 9 al 11 determina el valor de x y y

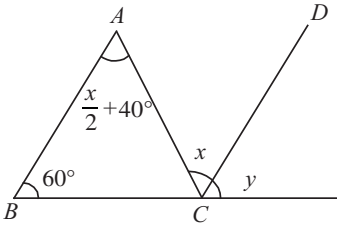

9. *Si* $\overline{AB} \parallel \overline{CD}$

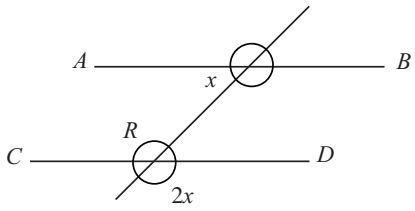

10. *Si* $\overline{AB} \parallel \overline{CD}$

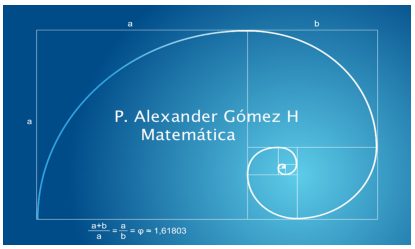

11. Si $\overline{AB} \parallel \overline{CD}$

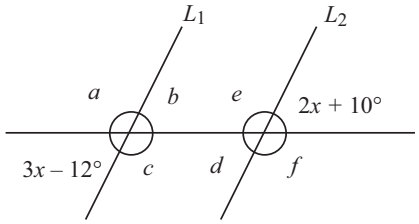

12. Si $\overline{AB} \parallel \overline{CD}$, encuentra la medida del ángulo R

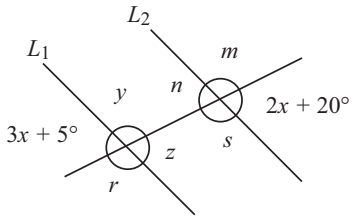

En las siguientes figuras encuentra la medida de los ángulos que se forman:

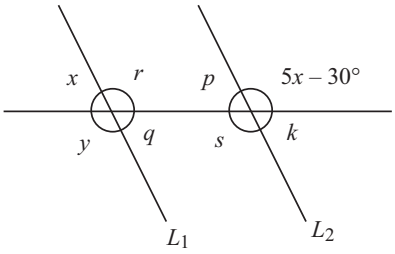

13. Si $L_1 \parallel L_2$

14. Si $L_1 \parallel L_2$

15. Si $L_1 \parallel L_2$

16. Si $L_1 \parallel L_2$
